

SEALING SOLUTIONS FOR THE MOBILITY OF THE FUTURE

Production

Seçil Kauçuk has ability of different production methods for the production of sealing products, which is its core business, according to the needs of the application.

- Rubber Extrusion
- Rubber Injection/Compression Molding
- Rubber Hose Production
- Rubber Mixing/Compounding

Product Development

R&D is a priority for **Seçil Kauçuk**. The new physical-mechanical requirements from customers and the environmental behaviour of traditional rubber compounds make it highly capable of developing new products. Additionally, it carries out quality control analyses required by the different industries in its fully-fledged R&D laboratory in line with international standards. **Seçil Kauçuk** continues its quality journey by focusing on development of products and processes.

Applications

Co-Ex and Tri-Ex Material _____ Sponge Compound
Tensile Cord _____ Corner Injection
Clip Assembly _____ Metal Insert
Flock Application _____ Drilling-Cutting / Cutting Out
Tape Application _____ Bonding
Coating _____ Splice Welding
Marking _____

Materials

Ethylene-Propylene: **EPDM**
Styrene-Butadiene Rubber: **SBR**
Nitrile Butadiene Rubber: **NBR**
Natural Rubber: **NR**
Polychloroprene: **CR**
Silicone: **VMQ**

Products

Dynamic Profiles

- Door/Body Profile
- Hood Seal
- Tailgate/Trunk Profile
- Secondary Sealings

Static Profiles

- Outer/Inner Belt Seal
- Glass Run Channel

Rubber Molding Parts

Low Pressure Hoses (Without Reinforcement)
Rubber Compounds

A 40-year passion...

Seçil Kauçuk is on its journey to excellence since 1983 and created a global brand providing products and services to more than 50 countries. With its expertise on gasket production, it has become a very important provider for many industries, especially automotive, home appliance, construction, and infrastructure. The production facilities are located in Turkey and Belarus. It also has subsidiaries in Germany, Poland, Belgium, Sweden and the United Kingdom to ensure the efficiency of sales operations and logistics, and exports gaskets to more than 200 clients worldwide.

Operating on a total area of 70.000 square meters, **Seçil Kauçuk** carries out all necessary production processes from design and modelling to packaging totally within its own scope. Seçil Kauçuk has the capacity to produce gaskets in various features, especially co-extrusion, using extruders of different capacities in shock tunnel microwave, salt bath, EPDM, TPV and silicone lines. Additionally, it manufactures injection moulded gaskets thanks to its expertise in this domain.

Seçil Kauçuk's R&D department has the most advanced laboratories. The department was accredited by the Ministry of Science, Industry, and Technology as an R&D Center in 2017.
